
Scenario-dependent smooth MW renormalization
Repopulated catalogs (fragile & resilient)
INPUT - HDF5
Dark-subhalo selection ($V_{max} \leq 8\,km\,s^{-1}$)
Classify subhalos: point-like or extended
Catalog reduction cuts
Extended subhalo lists
Raw CLUMPY rendering
Boost factor for each repopulation
OUTPUT - CSV
Point-like HEALPix map
Compare rendered vs. catalog J_s and correct ρ_s in lists
OUTPUT - FITS
Final J-factor template
Smooth MW + extended subhalos HEALPix map
Corrected CLUMPY rendering
